

Maquettes

A maquette is a fine art term and refers to a small mock-up of a fully realized three-dimensional sculpture or architectural project.

Henry Moore

Photograph of six terracotta maquettes for *Madonna and Child* 1943

- A maquette, also known as a *bozzetto* or *modello*, is a three dimensional object made as a preparatory study for a full-sized sculpture.
- Artists employ maquettes to test out shapes and figural poses, as well as to show patrons prospective designs. Many are never executed in their larger form, but can be appreciated as stand-alone works.
